

### 3. Critical accounting judgments and key sources of estimation uncertainty

In the application of the Group's accounting policies, management is required to make judgments, estimates and assumptions about the carrying amounts of assets and liabilities that are not readily apparent from other sources. These judgments, estimates and assumptions are reviewed on an ongoing basis.

#### 3.1. Critical judgments in applying the entity's accounting policies

The following are the critical judgments made by management, apart from those involving estimations (see note 3.2. 'Key sources of estimation uncertainty' below), that have a significant effect on the amounts reported in the consolidated financial statements.

- » Management assessed that a constructive obligation exists to provide pre-retirement schemes for employees as from the first day of service (see note 6.15. 'Employee benefit obligations') and therefore these pre-retirement schemes are treated as defined-benefit plans using the projected unit credit method.
- » Management concluded that the criteria for capitalizing development expenditure as intangible assets were not met.
- » Management makes judgments in defining the functional currency of Group entities based on economic substance of the transactions relevant to these entities. By default the functional currency is the one of the country in which the entity is operating. See note 7.8. 'Subsidiaries, joint ventures and associates' for a comprehensive list of entities and their functional currency.
- » As regards its Venezuelan operations, management decided to use the economic exchange rate for translating the VEF financial statements to the reporting currency for consolidation as from 31 December 2012. In view of the restrictions on dividend repatriation for overseas investors introduced in 2009, and given the ongoing dramatic decline in the economic exchange rate, combined with hyperinflation, management concluded that this is the best choice for providing a fair view of the contribution of the Venezuelan operations to the consolidated financial statements. Applying the economic exchange rate to the Venezuelan operations has further reduced the significance of their contribution to the consolidated financials ever since. In spite of the political and monetary instability, management was able to keep the company operational and hence concluded that it is still in control. At year-end 2017, the cumulative translation adjustments amount to € -57.3 million, which - in case of loss of control - would be recycled to income statement.
- » Management concluded that Bekaert, given its non-controlling interest of 13.0% at year-end 2017, has no significant influence in Shougang Concord Century Holdings Ltd and therefore the investment is a financial asset available for sale accounted for at fair value through equity. As any significant or prolonged decline in fair value provides objective evidence for impairment, management agreed to consider any decline in fair value (a) exceeding 30% of the cost as significant and (b) continuing for more than one year as prolonged.
- » Management concluded that the Company has control over Bridon-Bekaert Ropes Group ('BBRG') considering the terms and the conditions of the shareholders' agreement.
- » With respect to the bank covenants to which BBRG is subject (see note 7.3. 'Financial risk management and financial derivatives'), BBRG passed all covenant tests during 2017. Management concluded accordingly that all financial debt is classified consistently with its contractual maturity in the balance sheet also considering management's ability to take corrective measures. Management continues to monitor the evolution of the bank covenants going forward.
- » Management concluded that the Company has control over Bekaert Maccaferri Underground Solutions BVBA considering the share options agreed between the parties.
- » Given its global presence, Bekaert is exposed to tax risks in many jurisdictions. Tax authorities in those jurisdictions conduct regular tax audits which may reveal potential tax issues. While the outcome of such tax audits is not certain, management is convinced that Bekaert, based on an overall evaluation of potential tax liabilities, has recorded adequate tax liabilities in its consolidated financial statements. At year-end 2017 uncertain tax positions recognized as income taxes payable amount to € 65.4 million (2016: € 79.1 million).

### 3.2. Key sources of estimation uncertainty

The following are the key assumptions concerning the future, and the other key sources of estimation uncertainty at the end of the reporting period that have a risk of causing material adjustments to the carrying amounts of assets and liabilities within the next financial year.

- » Deferred tax assets are recognized for the carry-forward of unused tax losses, unused tax credits and temporary differences to the extent that it is probable that taxable profit will be available in the foreseeable future. In making its judgment, management takes into account elements such as long-term business strategy and tax planning opportunities (see note 5.5. 'Income taxes' and 6.6. 'Deferred tax assets and liabilities').
- » Credit risk related to customers: management closely reviews the outstanding trade receivables, also considering ageing, payment history and credit risk coverage. Specific and general bad debt allowances recognized are based on management's best estimates at the balance sheet date (see note 6.7. 'Operating working capital').
- » Employee benefit obligations: the defined-benefit obligations are based on actuarial assumptions such as discount rate and salary increases, which are extensively detailed in note 6.15. 'Employee benefit obligations'.
- » Provisions for environmental issues: at each year-end an estimate is made of future expenses to remediate soil pollution, based on the advice of an external expert (see note 6.16. 'Provisions').
- » Impairment: the Group performs annual impairment tests on goodwill and on cash-generating units for which there are indicators that the carrying amount might be higher than the recoverable amount. This analysis is based upon assumptions such as market evolution, market share, margin evolution and discount rates (see note 6.2. 'Goodwill').
- » New capacity expansion projects in Russia show regained confidence in the Russian market potential. Therefore management reversed the impairment loss of 215 million ruble (€ 3.3 million) recorded on the assets of its Russian operations since 2014.
- » Fair value measurements that cannot be fully based on observable market parameters involve judgment that could affect estimated fair value. This includes the conversion option attached to the convertible bond issued in June 2016 and the put option granted to Maccaferri for the non-controlling interests in Bekaert Maccaferri Underground Solutions BVBA.
- » In June 2017 Bekaert and ArcelorMittal closed the transaction to integrate Bekaert's formerly wholly-owned subsidiary in Sumaré (Brazil) into the BMB (Belgo Mineira Bekaert Artefatos de Arame Ltda) partnership. In that context the fair value of the stake of 44.5% retained by Bekaert was based on the purchase consideration for the 55.5% interest disposed.
- » Tax receivables (ICMS) in Brazil: recovery of the tax receivables of Belgo Bekaert Arames Ltda and BMB-Belgo Mineira Bekaert Artefatos de Arame Ltda is deemed highly probable as several action plans have already been successfully implemented. Other tax claims in Brazil, including claims relating to the taxability of ICMS incentives, have not been provided for, supported by legal advice (see note 6.4. 'Investments in joint ventures and associates').
